Education

Xidian University Xi'an, Shaanxi, China
Electronic Information Engineering, School of Electronic Engineering *Sep. 2024 – Jun. 2028*

- Overall Score: 7/411 Academic performance: 2/411
- Selected courses: C Programming (100), Python Programming (99), Advanced Mathematics (95), EDA (90)

Projects

Compositional Zero-Shot Learning | *Project Lead, First Author* Mar. 2026 – Present

- **PRISM: Primitive-Integrated Separable Modulation with Priority Visual Memory Queue for Compositional Zero-Shot Learning**, AAAI 2027 (under second-round review)
- **Jianhua Wang**, Zhihang Zheng, Yang Liu
- Provincial Innovation and Entrepreneurship Training Program (funded)
- Extended primitive sharing in CZSL from offline representation learning to unlabeled test streams, transferring test-time evidence via hierarchical residuals and a visual memory queue; substantially improved recognition in large-scale open-world and long-tailed settings, and reduced repeated inference cost over large candidate spaces with Adaptive PRISM-Lite.

Deep Learning for Antifungal Peptide Identification | *Core Member (1/3)* Dec. 2024 – Nov. 2025

- **iAFP-fLRM: Accurate identification of antifungal peptides via hybrid deep learning architecture and multi-modal feature fusion**, *Biophysical Chemistry* (SCI, JCR Q3)
- Provincial Innovation and Entrepreneurship Training Program (rated Excellent at completion)
- Responsible for amino acid sequence fusion and screening, part of the code, and paper writing. Built iAFP-fLRM with a Transformer encoder, CNN, LSTM and the BLOSUM62 matrix to predict antifungal activity directly from sequences, reaching 95.02% accuracy.

Integrated Radar-Communication Waveform Design | *Core Member (1/5)* Apr. 2025 – Present

- Built a joint optimization model of periodic/aperiodic integrated sidelobe level and PAPR under fixed communication-symbol constraints; derived a two-stage MM algorithm with closed-form updates.
- In 1000 Monte Carlo simulations, reduced mean PAPR from 6.76 dB to 2.46 dB (99th percentile to 3.20 dB), significantly suppressed autocorrelation sidelobes, and kept BER close to that of the original OCDM.

Honors

- Oct. 2026: National Scholarship
- Oct. 2026: Outstanding Student Award, Xidian University
- May 2026: Special Prize, Spark Cup Academic Competition, School of Electronic Engineering
- May 2026: First Prize (University Level), National Undergraduate Statistical Modeling Competition
- Jan. 2026: Outstanding Communist Youth League Member, Xidian University
- Jan. 2026: Shanghai Longcheer Technology Social Scholarship
- Dec. 2025: Third Prize (Preliminary Round), National College English Reading Competition
- Dec. 2025: Second Prize (Shaanxi Province), Chinese Mathematics Competitions for College Students
- Dec. 2025: Third Prize (Northwest Region, C Track), National Collegiate Computer Skills Challenge
- Nov. 2025: Second Prize (Shaanxi Province), Contemporary Undergraduate Mathematical Contest in Modeling
- Oct. 2025: First-Class Academic Scholarship, Xidian University
- Oct. 2025: Outstanding Student Award, Xidian University
- Sep. 2025: National Third Prize (English Reading), BTTBL Cup College English Proficiency Competition

Technical Skills

English: CET-4: 562, CET-6: 532
Languages: C, Python, MATLAB, Verilog
Deep Learning: PyTorch; CNN, LSTM, Transformer
Leadership: League Branch Secretary (administrative class), Class Monitor (major class)
